CARL A. HANSEN NURSERY

Established 1922

HARDY PLANTS FOR THE NORTHWEST

BROOKINGS, - SOUTH DAKOTA

Carl A. Hansen, Sole Owner

CARL ANDREAS HANSEN

Thank You!

First of all I wish to sincerely thank those who sent the orders last spring and fall for nursery stock. I certainly appreciate the patronage, which was unusually good for a starting year, and I wish to assure my customers that the best of attention was given all the orders entrusted to our care, and that they always will be given the same careful attention in the future. I especially thank those who so kindly sent me complimentary letters on our service and stock sent out. We will do all we can to continue to merit this appreciation of our service. Yet, since we are all human, mistakes sometimes occur. But I want you to know that if for any reason whatsoever, our service isn't satisfactory to you, we want you to tell us, and we will do all within our power to correct it. You must be satisfied or we will not be.

Since last spring quite a number of improvements have been made at the nursery. Among the more important ones are,—a new office and residential building, a large tree cellar, a fine packing shed,

much new equipment and a good sized addition in acreage and planting. With the addition of these improvements we are better equipped than ever to give a better and quicker service, and earlier shipments in spring.

Professor N. E. Hansen is my father but he is positively in no business way whatever connected with my nursery. Ever since I can remember I have been interested in plant work and it has always been my desire to go into the special propagation of my father's introductions. Now I am happy to say that the apple, plum, and ornamental introductions of my father's, offered in my catalog this year is the largest number ever offered at any one time by any nursery. As a descriptive bulletin alone this catalog makes a fine reference book for the Hansen Introductions.

We are offering a good many new and fine things in both the fruit and ornamental line this year and I am sure that there are many things in this catalog that will at least interest you and a number that you will want to purchase. With the splendid growth our stock has made the past season and with the addition of the new buildings and other equipment I can assure you of the best of service and early shipments on all orders you send us.

Cordially yours,

Carl A Hansen

TERMS OF SALE AND SHIPMENT

PAYMENT TERMS: Strictly cash in full in advance or else 25 per cent payment down and the balance C. O. D. Remittances should be made with Check, Money Order, Bank Draft, or Money in registered letter. United States Postage Stamps of small denomination accepted up to \$2.

PACKING TERMS: No packing charges on any orders for trees, shrubs, bulbs, tubers, roots or seeds.

SHIPPING TERMS: Shipments of tubers, roots, seeds and Gladiolus bulbs, are usually made about the first of May. Trees and shrubs are usually shipped sometime during April. All are shipped in plenty of time for early spring planting.

DELIVERY TERMS: All seeds, bulbs, roots and tubers are sent prepaid when cash in full is remitted at the time the order is placed. Trees and shrubs are shipped delivering charges collect, unless otherwise stated.

—!! SPECIAL 1926 OFFER !!—

All \$10.00 Orders Shipped Prepaid

It costs but little more to ship a good sized order of nursery stock than it does to ship a small one. So, to encourage the sending of larger orders, we will bear the expense of the transportation charges on all orders for nursery stock,—of trees, shrubs, bulbs, etc., during the spring shipping season of 1926, providing the order is paid for in full at the time it is placed and amounts to \$10.00 or more.

REGARDING CANADIAN ORDERS

Because of government regulations it is necessary for Canadian customers of United States nurseries to obtain a permit from the Canadian Department of Agriculture before they may have the nursery stock they have ordered shipped to them. To save our customers this trouble we have made arrangements for doing this work ourselves direct. All that is necessary is that we receive your order, and we will attend to the rest at no further trouble or expense to you.

Victoria Rhubarb

Everyone enjoys a dish of fresh rhubarb sauce and rhubarb pie, to say nothing of the delicious rhubarb jams and jellies. They all have a welcome. And especially so if the variety is Victoria. Some think that rhubarb is just rhubarb, but it has its varieties as do plums and apples. Victoria is the best of them all. A very prolific producer of fine large strawberry-red stems of excellent, fine quality. Victoria is sweeter than most rhubarb and takes less sugar in cooking.

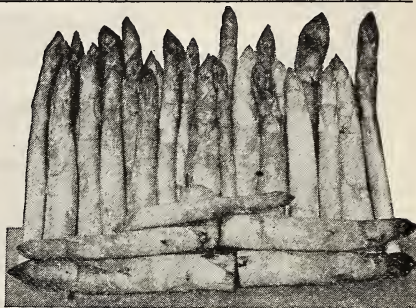

PRICES PREPAID: Per Root 25c; Six Roots \$1.00; 12 Roots \$1.75.

Washington Rust-Proof Asparagus

No garden is complete without asparagus, and a better variety than Washington Rust-Proof would be hard to select. Rust

proof, stalky, light green, tender stems all go to make this asparagus the favorite of the garden. Nice succulent stalks from early spring till late into the summer or all summer long if properly mulched and cut.

PRICES PREPAID: Per Root 15c; 10 Roots \$1.00; 25 Roots \$2.25; 100 Roots \$8.50.

Progressive Everbearing Strawberry

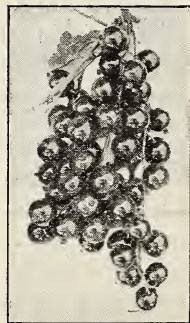

A garden without at least a few strawberries is almost like a garden without flowers. Every garden should have some and most gardens do, but not all those that have strawberries have the best kind. Old plantings to do best should be dug up and replanted from time to time. Progressive Everbearing Strawberries make strawberry-time last all summer long,—bearing large, delicious, juicy, red berries from early spring till late fall. Progressive Everbearing is a heavy producer and vigorous grower.

PRICES PREPAID: Per Plant 5c; Six Plants 25c; 25 Plants \$1.00; 100 Plants \$2.50.

Perfection Currants

A very good currant for the northwest. The fruit has a very fine, sweet flavor, is of good size, few seeds, and is born in large clusters of bright red fruit. It bears prolifically. The bush is upright in habit, vigorous and quite hardy throughout the northwest. Perfection Currant was well named and is surely a splendid currant for general use in the home garden.

PRICES: Per Plant 55c; 12 Plants \$5.00; 25 Plants \$10.00, Prepaid.

Carrie Gooseberry

A popular variety of real worth. Considered one of the hardiest, healthiest, and most productive gooseberries grown. The plant is a very vigorous grower which aids it in carrying its large crops of fruit without injury to the plant. The stems are nearly thornless which is an advantage when it comes picking time. The berries grow to a fine large size, are light red in color and have a pleasing flavor. Every home gardener or commercial fruit grower should be sure to have ample stock of Carrie Gooseberry.

PRICES: Per Plant 45c; 12 Plants \$4.00; 25 Plants \$8.00.

Fewthorn Red Raspberry

EXTRA FINE—FIRM—PROLIFIC—VERY HARDY
MOSAIC-FREE

A hybrid of the Minnetonka Ironclad red raspberry and the wild red raspberry of the Black Hills.

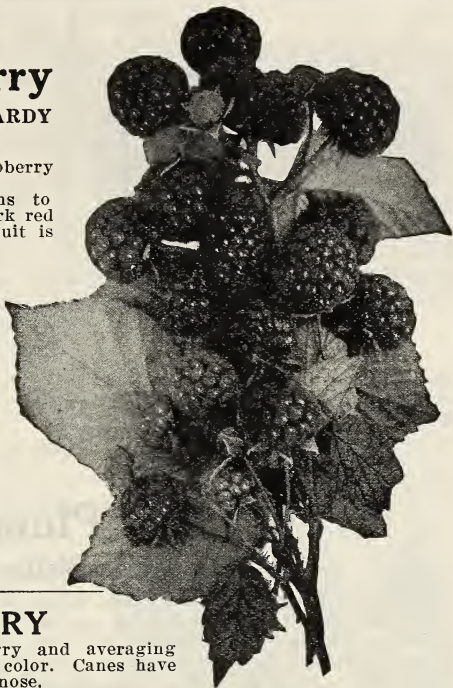

The fruit is of good size from five-eighths to three-fourths of an inch in diameter. Color a dark red and attractive looking. Flavor delicious. The fruit is firm and keeps well.

A remarkable thing about Fewthorn Raspberry is its smooth cane. The cane being almost thornless except for a few weak bristles near the ground and on the stems near the berries. This feature makes it a much easier and care-free task to pick the fruit.

Another big thing which makes the Fewthorn such a favorite is its wonderful bearing. Usually bearing the same year it is planted and from then on bearing heavy annual crops of fine, large berries.

Fewthorn is perfectly hardy for the Dakotas, Minnesota, Montana, and Nebraska, and well worthy of further planting thruout the prairie provinces of Canada. So far this remarkable variety has been entirely free from Mosaic.

PRICES: Per Plant 25c; Six Plants \$1.00; 25 Plants \$3.50; 100 Plants \$12.50, Prepaid.

STARLIGHT RASPBERRY

Of the same pedigree as the Ohta Raspberry and averaging somewhat larger in size and equally as bright in color. Canes have some thorns, and are quite resistant to anthracnose.

PRICES: Per Plant 15c; 4 Plants 50c; 12 Plants \$1.25; 25 Plants \$2.50.

Sunbeam Raspberry

One of Professor N. E. Hansen's first red raspberry introductions and now famous thruout the northwest. Plant vigorous, productive, purple-caned, and freely sprouting. Has survived a temperature of 41 degrees below zero, without protection.

PRICES: Per Plant 15c; 4 Plants 50c; 12 Plants \$1.25; 25 Plants \$2.50.

Ohta Raspberry

The name, meaning much or many in the Sioux Indian language, surely describes the nature of its bearing habit. Ohta is very hardy far north. The fruit is a beautiful red, fairly firm, and of good quality.

PRICES: Per Plant 15c; 4 Plants 50c; 12 Plants \$1.25; 25 Plants \$2.50.

Smooth Cane Raspberry

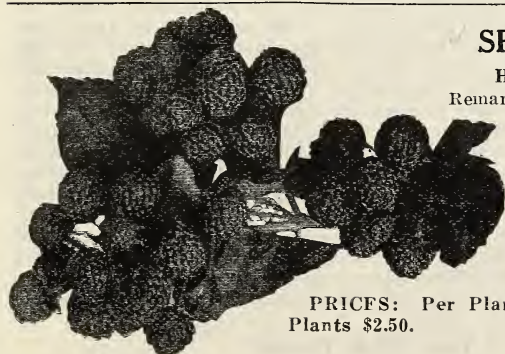

Of the same pedigree as the Fewthorn Raspberry. Plant is strong and stocky. Fruit round and up to three-fourths of an inch in diameter, and quite firm. The canes are thornless.

PRICES: Per Plant 15c; 4 Plants 50c; 12 Plants \$1.25; 25 Plants \$2.50.

Twilight Raspberry

Another of Professor N. E. Hansen's raspberry introductions. Was selected from a large plantation of mixed northern wild red raspberries. Canes very strong. Fruit quite large, and a good light red color. Quality good.

PRICES: Per Plant 15c; 4 Plants 50c; 12 Plants \$1.25; 25 Plants \$2.50.

SPINELESS RASPBERRY

HARDY—PRODUCTIVE—STRONG

Remarkable for its thornless canes, and large fruit of extra good flavor. The canes are practically entirely smooth, have a blue bloom, and are almost immune from cane rust or anthracnose.

Spineless is a hybrid of the wild red raspberry from Cavalier, North Dakota, and the London Red Raspberry. It is hardy well north into Canada. The fruit grows to a size of three-fourths of an inch in diameter, is quite firm and usually forms in nicely compacted clusters.

PRICES: Per Plant 15c; 4 Plants 50c; 12 Plants \$1.25; 25 Plants \$2.50.

Assiniboin Plum and Pit

west fruit men generally as a sure thing for a good crop of good fruit under the most trying conditions. The fruit of Assiniboin cooks up well and makes fine preserves, as well as being a fine fruit to eat from the tree.

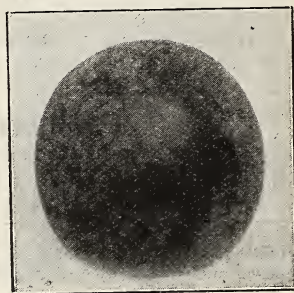

PRICE: Per Tree, \$1.00; 12 Trees \$10.00, Prepaid.

Wastesa Plum

A Worthy Select Native

Meaning "delicious" in the Sioux Indian language, is well named because it is regarded as one of the very best in quality of all the pure native plums. The fruit of Wastesa is very large and of excellent quality, with marbled red and yellow skin, and flesh which is almost free-stone. A heavy annual bearer, and really wonderful for its long continued productiveness. The flavor, size, and productiveness all combine to make Wastesa one of the best of the Hansen Plums for good eating and good canning. At a time when there were 6,000 native plum trees in bearing at the South Dakota State College Horticulture Experiment Grounds, Wastesa was considered the best of all in quality. Wastesa produces an abundance of pollen and it and Yuteca should always be included in every plum planting to insure proper pollination of other varieties of plums.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Wastesa

Pembina Plum

Gaining in Favor

Pembina Plum

Because of its fine fruiting performance under very trying circumstances, Pembina has the past few years come rapidly to the front as a plum deserving of more attention by fruit men. Being more resistant to the common plum diseases and fruiting quite well in apparently the worst of poor fruit years, Pembina has been placed in a stronghold of favor. Its superior hardiness at first brought it more attention further north but lately its flavor has won it so much favor with fruit men further south that it now is in growing demand with good fruitmen throughout the Dakotas, Montana, Nebraska, and Minnesota. Pembina plum is a remarkable hybrid of the hardiness of the Manitoba wild plum with the Red June, a large Japanese plum. Pembina

is considered by some to be one of the very best of the Hansen Hybrid Plums because of the fine flavor, good size, heavy annual bearing, and great hardiness. The tree makes a sturdy, well balanced growth of good habit. The fruit ripens early, keeps well, cooks up well and makes fine preserves. Pembina is bearing well and is perfectly hardy in Manitoba, Canada.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Toka

Toka Plum

A Good Commercial Possibility

A cross between the native northwestern wild plum and the intensely fragrant Chinese apricot, *Prunus Simoni*. The large, remarkably firm fruit has a rich fragrance and excellent quality, good for eating and canning. In Iowa some think that Toka promises to be a great commercial plum, and with a little more experience with the plum it will no doubt prove to be such as it is a good keeper. Altho the skin and flesh is firm it is not tough and can be readily eaten or cooked. The bright color and rich fragrance of the fruit would help much to attract attention to it and a sample would surely bring the sale. The Toka is an early and heavy bearer and the tree makes a very vigorous, strong, stocky growth.

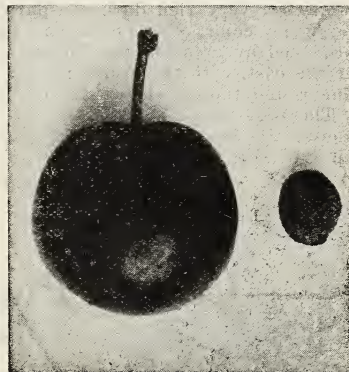

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Champa Cherry

The Dry Land Champion

A seedling of Sioux Sand Cherry. Fruit of good quality, somewhat larger than the Sioux, sprightly, juicy, glossy black in color and with a small pit. Champa makes a strong upright bush six to eight feet in height. The wonderful wealth of blossoms, white with pink tinge, make Champa very worthy of planting as a lawn shrub only, but it bears freely and annually even far north. Champa is especially a favorite in Montana and North Dakota because of its fruiting performance under drought conditions. Its heavy cropping and good fruit makes it preferable by some to even some of the sand cherry hybrids like Sapa and Opatá.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Champa Cherry and Pit

Ojibwa Plum

The Waneta Plum of the North

A complex hybrid of five *Prunus* species,—*Nigra*, *Angustifolia*, *Cerasifera*, *Triflora*, and *Simoni*. Flesh is yellow and of good flavor, skin is thin and free from acidity. Does well in the north, its hardiness making it a fine tree for all the Canadian prairies. It is hardy and fruitful far north into Manitoba. Ojibwa bears heavily. The fruit has somewhat the appearance of a native Manitoba plum only much larger, and the skin is thinner. The Ojibwa, because of its distinct flavor should be given more trial further south. The tree is erect growing and sturdy and matures its wood early in the season, thus practically eliminating the danger of any early frost damage to the current season's young growth. The fruit also ripens early, usually being harvested before there is danger of frost damage. Somewhat delayed blooming in spring and a tendency toward frost resistant blossoms helps do away with late spring frost damage to the setting of fruit. The fruit of Ojibwa keeps well and further experience may prove it to be a profitable plum for commercial purposes for the north. For the northern part of South Dakota, all of North Dakota and the Canadian prairie provinces, Ojibwa is deserving of more extensive planting and perhaps higher praise than some of the plums now being boosted there.

Ojibwa Plum

OJIBWA—THE PLUM OF THE NORTH

Very Hardy—Fancy Quality—Heavy Bearing

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Stanapa—Purple Leaf Sand Cherry

Vigorous Growing, Beautiful

Shrubs with colored foliage are needed for contrast and variety on the lawn. Since the Common Purple Leaf Barberry was barred, it has been a matter of real concern as to what we should use for red-leaved shrubs on the lawn. Because Stanapa and Cistena so aptly fill this want, explains the reason for their sudden popularity. Stanapa and Cistena are very attractive all season. The leaf color is a very rich dark red-purple or wine color. The Stanapa was produced by crossing the Purple-Leaf plum from Persia, which is so popular on the lawns of the east, with the South Dakota sand cherry. The Stanapa, when not trimmed, makes a fine round topped shrub six to eight feet in height.

Stanapa Adds Color and Beauty to the Lawn

The illustration shows how well Stanapa may be used in a border planting around the house. Its beautiful colored foliage adds much color to the other plantings and brightens up the lawn in summer. In winter the reddish colored bark enriches the landscape.

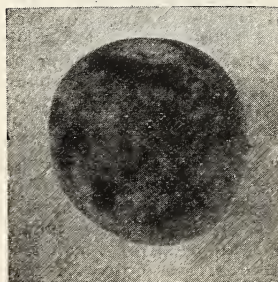

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Cistena Purple Leaf Sand Cherry

For Beauty of Color

A dark purple leaf sand cherry of the same pedigree as Stanapa but in habit it takes more after the seed parent, the South Dakota sand cherry. In planting groups of ornamental shrubs, Cistena should be planted in front of the taller growing Stanapa. Cistena is more intense in the purple or deep red coloring of the foliage, which is so striking and beautiful all the season. The Persian Purple Leaf plum is said to trace back to the garden of the Shah of Persia, but this tree of unique beauty winter kills on the prairie. Cistena and Stanapa, which are both crosses between the Persian Purple Leaf plum and the South Dakota sand cherry, combine the good points of both and are a real addition to our prairie lawns.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Kiowa

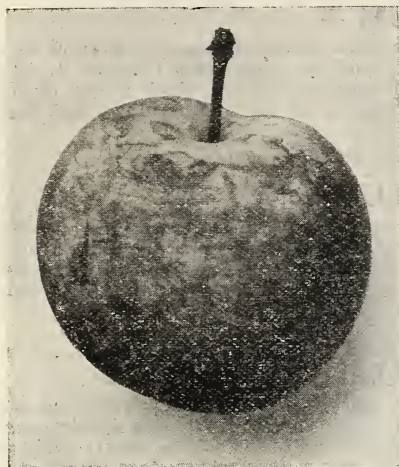

Kiowa Plum

To Prolong the Plum Season

A sister variety of the Kaw and much like it in fruit and season, ripening after the rest of the plums have fallen. A variety best adapted perhaps, because of its pedigree, for planting south of here rather than north. However, Kiowa has proved hardy here and its season of ripening rather than its hardness has been the factor which induced the further south movement. Kiowa has proved to be a very good eating plum and one which rounds out the plum season and prolongs its delights. The tree makes a good, well-balanced,

symmetrical growth, with fine, glossy green foliage, quite well serrated, which is of ornamental value.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Tawena

Tawena Plum

Another New Hansen Introduction

Giant Size, Early, Heavy Annual Bearing

Waneta Plum—perhaps to date the most famous of all of the Prof. N. E. Hansen plum introductions had to give up some of its popularity when its sister Kahinta was introduced, because of Kahinta's tendency for better annual bearing.

Now comes Tawena,—another full sister of Waneta and Kahinta. Results so far indicate that Tawena apparently possesses the best points of both, being in size equal to or better than either, in flavor somewhat of a mixture of both, and in bearing almost a sure annual heavy cropper. The tree growth of Tawena is exceptionally fine and it makes a sturdy, well branched and balanced tree with scarcely any pruning.

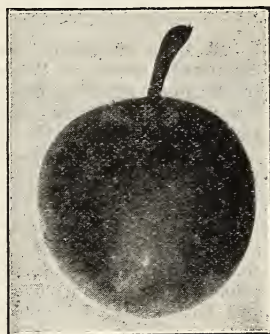

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Sansoto Plum

Bears After Earlier Plums

After you have harvested and disposed of all the Opata and Sapa along comes the Sansoto to round out the season. The fruit of Sansoto is round, about one and three-eighths of an inch in diameter, with polished black skin, blue bloom, and a pleasant, sprightly juicy green flesh, altho Sansoto is not as sweet as Opata. Sansoto, like all the other sand cherry hybrids, blooms later than the ordinary native plums and thus escapes the late frosts which sometimes reduce or destroy the native plum crop. The Sansoto bears abundantly the year after planting. It is really a marvel for its early and long continued bearing. The tree is very strong, has a spreading habit and should be permitted to branch from the ground up. This low bushy form will protect the heavy crop of fruit and keep it close to the ground out of the way of strong winds.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

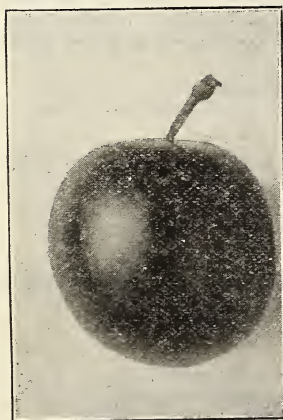

Sansoto

Wachampa Plum

A California Cherry Rival

Has the same pedigree as the Sapa and is much like it in fruit but is a stronger grower in nursery and orchard. The name Wachampa is the Sioux Indian for "blood cherry," which describes it to an extent because of its dark blue-red interior. Wachampa is one of the strongest growers of all the Sand Cherry Hybrids and is a very heavy bearer. Like Sapa it bears freely the year after planting a one year old tree. The fruit of Wachampa keeps well after picking. Try Wachampa and its sister varieties Sapa, Ezaptan and Etopa on the table alone with the late black-fleshed sweet cherries from California, which come on the market about the same time. You will find many people will consider these Hansen Sand Cherry-Plum Hybrids are fully equal in table quality to the sweet black cherries from California, and usually a good deal larger in size.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Wachampa

CREE PLUM

A large, early, red plum of choice quality. The Cree is fast coming to the front as a very choice plum for both North and South Dakota and far north into Canada. It is a cross between the wild plum of Manitoba and the Combination Plum which is one of the choicest plums of California. The Cree is a rare mingling of extreme hardiness and high quality. It is an early and heavy bearer.

Price: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

TOKATA PLUM

Some good plum growers consider Tokata the very best in quality of all the Hansen Hybrid Plums. No wonder! For it is a cross of the intensely fragrant and rich flavored apricot plum of China, Prunus-Simoni, with one of the very best flavored native plums, DeSota. Tokata combines the best points of both in flavor. The fruit is large, with rich, orange red skin and flesh and a perfect free-stone.

Price: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

OKIYA PLUM

A very early dark red plum with sprightly sweet juice and green flesh. Okiya has the same pedigree as Opatá and is much like it in every way. The fruit averages smaller than Opatá and makes a fine substitute for the sweet cherry of California. It is mighty good to eat, makes splendid preserves, and cooks up well into sauce. It is what might be called a cherry the size of a plum.

Price: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

WINNIPEG PLUM

A very productive plum of good size and quality, developed from the wild plum of Stonewall, north of Winnipeg. The Winnipeg plum is hardy in the most exposed places in the open prairies, and bears a heavy annual crop of a good quality of fruit. Winnipeg is a very popular plum in the Canadian Prairie Provinces and is deserving of more extensive planting further south. Both skin and flesh are sweet and juicy.

Price: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

ETOPA PLUM

Has the same pedigree as Sapa and like Sapa the fruit is of excellent quality, good size, and remarkable for its intense black purple-red color of the skin, flesh, and juice; also for the thin skin and small pit. It bears fruit freely and ripens late, thus extending the plum eating season. The fresh fruit of the Etopa is as good to eat as is the canned fruit, and both are real luxuries.

Price: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

YUTECA PLUM

Because of its persistent annual heavy cropping of such large fine fruit, some people believe that Yuteca, for certain localities, is in some ways equal or superior to Waneta. The tree makes a fine, large, vigorous growth and should always be included in every plum planting to insure proper pollination of the other plums. There is no need to worry about a fine flavor and good quality in your plum jam if Yuteca is used.

Price: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

TOPA PLUM

A choice native plum selected by Dr. N. E. Hansen from a plantation of over 6,000. The fruit is large and handsome. The tree is low.

PRICE: Per Tree, \$1.00.

KAMDESA PLUM

A great curiosity but for ornament and experiment only. It is the only known hybrid of the South Dakota sand cherry with the peach. Its flowers are sterile.

PRICE: Per Tree, \$1.00.

TECUMSEH PLUM

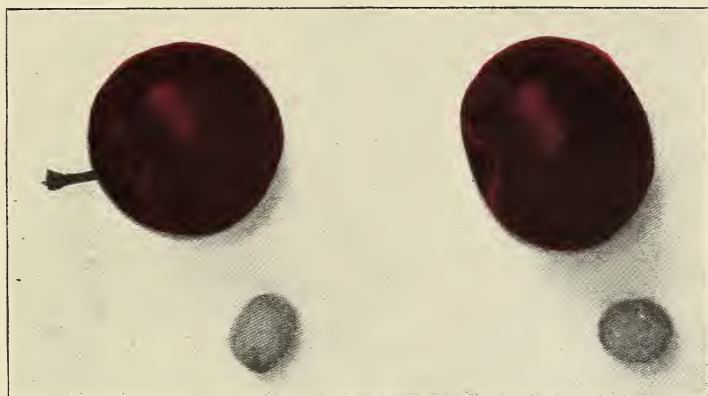

Surely an interesting plum as it is a combination of five species. The fruit is extra large in size and has an excellent flavor. A real fancy, extra early variety.

PRICE: Per Tree, \$1.00.

OKA CHERRY

DELICIOUS!

The Delight Of The Orchard

OKA CHERRY—Showing Small Pit

Professor N. E. Hansen's latest and best cherry-plum introduction. Fruit of good size. Skin color a rich dark, purplish-red, and flesh an intense purplish black red. Lovely to see! Delicious to eat! Bears the year after planting. Dwarf growing. Very Productive. Hardy!

GIVEN FREE WITH \$5.00 ORDER

If Received On Or Before February 25, 1926!

To encourage the sending of earlier orders we will send one Oka Cherry Tree FREE with every \$5.00 purchase of nursery stock received on or before the above given date, with remittance in full, and if the below order blank accompanies the order.

ONLY THREE TREES TO A CUSTOMER

In order to give more people a chance to try Oka Cherry and because our stock is limited it is necessary that we restrict the number of trees to three to a customer.

SPECIAL PRICES ON OKA CHERRY

Large Size Trees—\$1.75 Each. Packed and Delivered Free.

Small Size Trees—\$1.25 Each. Packed Free.

OR GIVEN AS A FREE PREMIUM

One With a \$5.00 Order. Two With a \$10.00 Order.

FEWTHORN RED RASPBERRY

EXTRA FINE — FIRM — PROLIFIC — VERY HARDY
MOSAIC-FREE

Good Fruits Of Fewthorn Are Easy To Raise

A hybrid of the Minnetonka Iron Clad Red Raspberry and the wild red raspberry of the Black Hills.

LARGE—ATTRACTIVE—DELICIOUS—FIRM

The fruit is of good size, from five eighths to three-fourths of an inch in diameter. Color a dark red, and attractive looking. Flavor delicious. The fruit is firm and keeps well.

CANES THORNLESS—EASY TO PICK

A remarkable thing about Fewthorn Raspberry is its smooth cane. The cane being almost thornless except for a few weak bristles near the ground and on the stems near the berries. This feature makes it a much easier and carefree task to pick the fruit.

WONDERFULLY PRODUCTIVE—BEARS THE YEAR PLANTED

Another big thing which makes Fewthorn such a favorite is its wonderful bearing. Usually bearing the same year it is planted, and from then on bearing heavy, annual crops of fine large berries.

PERFECTLY HARDY—MOSAIC-FREE

Fewthorn is perfectly hardy for the Dakotas, Minnesota, Montana, and Nebraska, and well worthy of further planting thruout the prairie provinces of Canada. So far this remarkable variety has been entirely free from Mosaic.

SPECIAL PREPAID PRICES

1 Plant 35c; 5 Plants \$1.00; 10 Plants \$1.75; 25 Plants \$4.00; 100 Plants \$13.50.

Gentlemen: For the enclosed.....Please send me prepaid
.....Fewthorn Red Raspberry plants.

Yours very truly,

OKA CHERRY

DELICIOUS!

The Delight of the Orchard

One of Prof. N. E. Hansen's latest cherry-plum introductions and considered his best so far. It is a sandcherry hybrid grown from seed of the Champa. The fruit is rounder than Sapa and has a somewhat brighter skin color, which is a rich, dark, purplish red. The flesh color is a rich, intense, purplish black red. It is in all a very remarkable plum to look at and surely a delight to eat. Jelly and jam made from Oka Cherries are equally good.

Pleasing!!!

The tree of Oka has a dwarf bushy habit and bears from the ground up. This remarkable feature is of unique value when harvesting the fruit. No need for a stepladder for all the fruit is within easy reach. But the dwarf size in no way indicates the size of the crop of cherries. For the strength of the plant goes into fruit production and not into surplus tree growth, which has to be trimmed out later anyway, and so consequently the limbs and branches burden

themselves with fruit. The leaves are small, sort of a pointed oval shape, and a bright, shiny green color.

The buds come in groups of three and are rather closely set together on the branches. Thus in a good fruit year at each bud group are two cherry-plums and one leaf, making the branches an almost solid mass of fruit.

Oka Cherry like the other of Professor N. E. Hansen's sandcherry hybrids bears extremely early,—always, if the season is at all favorable, the year after planting. Oka is an annual bearer and hardy thruout the northwest prairies. It is indeed an extraordinary cherry-plum of which too much praise cannot be given.

Oka Cherry being a quite recent introduction has not yet been as widely distributed as some of the other Hansen Hybrids, but it no doubt will be shortly. We are anxious to give Oka Cherry as wide a distribution as possible so it can be tried everywhere. But since our stock is small we are limiting the number of trees to be sold to a customer in order to give the supply we have as wide a distribution as possible.

ONLY THREE TREES TO A CUSTOMER!

PRICES: Per Tree, \$1.25; Three Trees, \$3.50.

SPECIAL!!

Select Large Specimen Trees \$1.75 Each; Three Trees \$5.00.
Packed and Delivered—FREE

YUKSA PLUM

A hybrid of the South Dakota sand cherry and a European apricot. It produces an abundance of beautiful white flowers which are sterile. A flowering plum and one which deserves a place in plantings.

PRICE: Per Tree, \$1.00.

TETON PLUM

The largest and best pure native South Dakota plum discovered so far by Dr. N. E. Hansen. The color is a good clear red. The flesh is of good quality.

PRICE: Per Tree, \$1.00.

OZIYA PLUM

Remarkable for its brilliant red color, having the brightest red skin of any of the Hansen Hybrid Plums. It is very early in maturing.

PRICE: Per Tree, \$1.00.

HUYA PLUM

A choice, very productive, native red plum of good quality. Huya is a very excellent plum for general use and the fruit keeps well.

PRICE: Per Tree, \$1.00.

SIOUX SAND CHERRY

One of the largest and best native South Dakota sand cherries selected by Prof. N. E. Hansen from many thousands of seedlings. Noteworthy for its mild pleasant flavor.

PRICE: Per Tree, \$1.00.

CHERESOTO PLUM

A perfect cross between the Sand Cherry and the DeSota Plum in looks and flavor. The tree is a heavy bearer and an annual producer.

PRICE: Per Tree, \$1.00.

INKPA PLUM

A sister to Hanska and the fruit has the much same apricot flavor which makes such delicious plum jam and continues plum time the year around.

PRICE: Per Tree, \$1.00.

EZAPTAN PLUM

Of the same pedigree as Sapa. The color of the fruit is dark purple, its flesh black from skin to pit. The pit is very small. The quality of the fruit is delicious.

PRICE: Per Tree, \$1.00.

KAW PLUM

A late plum for further south. Its firm skin has a pleasing bright dark red color. The yellow flesh has a particular crisp texture.

PRICE: Per Tree, \$1.00.

OWANKA PLUM

A very peculiar sand cherry hybrid in that it has an extremely bitter skin and very sour flesh, which some people like for jelly. The fruit is of good size.

PRICE: Per Tree, \$1.00.

ENOPA PLUM

A sister to Sapa but with dark red skin, blue bloom, and flesh green instead of black. The fruit has a sweet pleasant taste.

PRICE: Per Tree, \$1.00.

WAHONKA PLUM

In tree is much like the sand cherry hybrids. The fruit is round and has a dark red skin and green flesh which is red at the pit.

PRICE: Per Tree, \$1.00.

FRUITMAN'S SUCCESS ORCHARD

25 Trees—The Hansen Plums—15 Varieties

Only \$15.00, Prepaid!

Long experience proves that plum orchards bear best when many varieties are grown. The bees carry the pollen from tree to tree and from variety to variety and thus insure good pollination and setting of fruit. The South Dakota State College Horticulture Experimental Orchard here at Brookings has demonstrated this fact conclusively. To enable everyone to have the same success, the following collection of Professor N. E. Hansen plums is offered. The collection will contain not less than 15 varieties, our selection, but preference may be given which will be followed in so far as possible.

25 Assorted, Large Size, Hansen Plum Trees, \$15.00, Prepaid.

Mixed Plum Orchards Bear Best

SPECIAL SMALL SIZE TREE OFFER

To those who would just as soon or rather have small size trees, we have a few to offer of this same assortment, while they last at the following price:

25 Assorted, Small Size, Hansen Plum Trees, \$10.00, Prepaid.

CIKANA PLUM

Of similar pedigree to Opatá but of much later season. The skin is glossy black in color. The flesh is green, although slightly red at the pit.

PRICE: Per Tree, \$1.00.

SKUYA PLUM

"Skuya" is the Sioux Indian name for "sweet" and it surely is sweet. It bears freely on one year trees. Fruit is good size and medium early in maturing.

PRICE: Per Tree, \$1.00.

ZEKANTA PLUM

A large yellow native plum of good quality. Showy and good to eat. The tree is a heavy bearer and produces an abundance of pollen.

PRICE: Per Tree, \$1.00.

SELECT NATIVE PLUM TREES

Many farmers prefer to plant a plum grove, thicket or hedge for shelter instead of the usual windbreak trees, as in this way they get protection from the wind and also a crop of fruit. But budded trees for this purpose would be too expensive. These seedlings we have to offer are all one and two years old and are good strong, healthy stock. As new varieties of plums all come from seed, it may be possible that some of the plums you get may prove to be choice fruit and worthy of introduction. If so, you have the privilege of naming and propagating them if you wish, or we can do this for you on contract.

PRICE: Per Tree 10c; 12 Trees \$1.00; 100 Trees, \$7.50.

Select South Dakota Sand Cherries

For Ornament and Utility

Few wild fruits have taken so well to cultivation as has the South Dakota Wild Sand Cherry. Small dwarf growing when in the wild, and larger and more vigorous growing when under cultivation and each succeeding generation seemingly improving in flavor and size of fruit. The silvery, glossy color of the leaves in summer and especially on windy days is a beautiful sight. The brownish red stems in winter make pretty winter scenery. Splendid to plant on the lawn in front of taller shrubs. The fruit makes fine preserves and usually good eating. A plant which combines beauty and utility that every home should have.

Sand Cherries Are Fruitful

PRICE: Extra Large Bushes 40c each; 3 Bushes, \$1.00; 12 Bushes, \$3.50. Small Size Bushes, 25c each; 3 Bushes, 50c; 6 Bushes, \$1.00; 12 Bushes, \$1.75.

Sand Cherries Are Ornamental

Spearfish Yellow Chokecherry

A chokecherry with yellow fruit from Spearfish, South Dakota, introduced by Professor N. E. Hansen. An interesting novelty, but perhaps of little fruiting value except for jellies, for the fresh fruit is choky as in the common chokecherry, but the cooked fruit makes up into a lovely light golden jelly. Its main value is as an ornament because of its bright green foliage and upright habit which is a distinct addition to any landscape. Because of the objectionable habit of our common chokecherries of suckering we have budded these trees on May Day Tree in order to eliminate this fault.

PRICE: Per Tree \$1.00; 12 Trees \$10.00, Prepaid.

Boughen Sweet Chokecherry A New Hardy Cherry For The Far North

Discovered by W. J. Boughen near Valley River, Manitoba, Canada. Upon being shown the fruit, Professor N. E. Hansen was so pleased with it that he wanted some stock of it for further work. Later he introduced it and named it tentatively after Mr. W. J. Boughen. The fruit is medium in size and appears much like any other chokecherry, but in flavor really is better and there is scarcely any trace whatever of the usual sour pucker of the common chokecherry. The plants offered are budded on May Day Tree and thus suckering is eliminated.

PRICE: Per Tree \$1.00; 12 Trees \$10.00, Prepaid.

SPECIAL EXPERIMENTAL ORCHARD

35 Hansen Varieties—Only \$25.00, Prepaid—35 Hardy Trees

The great success of some of the Professor N. E. Hansen Plums, Apples, and Crab Apples has stimulated interest in his other varieties that did not get so widely distributed. All of us have the experimental urge. If we are interested in fruit we want to know what varieties do the best where we live. This is not always easy to determine. A trial test is really the only test by which to find out, and so to be of special service to experiment stations and to experimenters in country or town, the following offer is made,—an offer not to be duplicated anywhere!

35 (Thirty-five) Different Varieties of
the Professor N. E. Hansen Plums, Apples,
and Crab Apples, One Tree of Each Variety,

—TOTAL 35 TREES AND 35 VARIETIES—
!! Only \$25.00, Prepaid !!

NOTE: This is our selection, but any preference you may give will be followed in so far as our stock of the varieties wanted will permit.

Kahinta Plum

**Large, Good Flavor, Heavy Bearing,
Hardy**

Kahinta Plum

large California plums, although no doubt because of its thin skin would not ship as well. However, this feature makes Kahinta a better canning and eating plum, and should not for reasonably long distances retard Kahinta from being a profitable commercial plum to ship. Kahinta and Waneta are two very popular plums that have gained much headway in the last few years, and are rapidly displacing many of the older native plums of the Dakotas, Minnesota, Nebraska and Iowa—which are falling into disfavor because of their lighter bearing and less quality.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Tom Thumb Cherry

Canada's Favorite

At present, possibly no other plum or cherry enjoys such great and well earned popularity in the Canadian Prairie Provinces as the Tom Thumb Cherry. A cross between the South Dakota sand cherry and one of the choice, large Japanese plums. Tom Thumb Cherry is a niece, so to speak, of the Sapa and much like it in fruit, but instead of being a tree the Tom Thumb Cherry is a low bush just right for protection by snow drifts. Tom Thumb Cherry like Sapa also bears an abundant crop of fruit the year after planting and annually thereafter. It is the nature of tree growth of Tom Thumb Cherry to be low and bushy, but this size by no means indicates the size of the crop it will bear. Like other sand cherry hybrids, Tom Thumb Cherry loads down its branches with thick, heavy clusters of fruit. The cherry pie made from Tom Thumb Cherries is delicious. Tom Thumb Cherry fruit is also fine to eat fresh and for canning it is perhaps the best of any of the Hansen Hybrid Sand Cherries in preserving the shape of the whole fruit, thus having much the same appearance and as good or better quality as the canned cherries you buy. Thruout the prairie provinces of Canada the Tom Thumb Cherry is highly recommended by good fruit men. By performance test, Canada is the favored land of the Tom Thumb Cherry, but the northern prairie states of the United States should plant more Tom Thumb Cherries for its sure results and good quality.

Tom Thumb Cherry

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

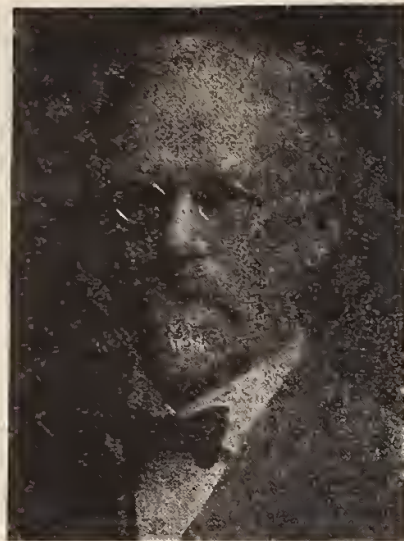

ANOKA—The Wonder Apple

ANOKA

Will Bear

On One

Year Wood

DR. N. E. HANSEN

Originator of the Famous Anoka Apple.

ANOKA

The Best

Of 10,000

Seedlings

takes 12 to 15 years to come into bearing, which is too slow. Dwarf apple roots or stocks have been recommended, but lack hardiness and demand too much care in pruning the trees budded on them. But in Anoka the whole nature of the tree is changed, so that early bearing of fruit is secured and the tree remains of moderate size to permit easy spraying. The tree is of round topped habit, beautiful in flower and fruit.

Anoka really upsets all the ordinary ideas about apple trees, because it bears on one year wood and keeps it up year after year. Anoka means a new era in apple culture. In thousands of small gardens in country and town the Anoka will be planted where no apples were planted before because of the slow fruiting and the large size of trees. Anoka is really an excellent early summer eating apple so will be welcome in many places where the tender-fleshed summer apples do not reach in long distance shipping. Anoka will no doubt become the leading apple in many states both for the home orchard and for ornament on the lawn.

Throughout many states nursery salesmen insist on having everybody include some Opata plum in their order. They do this because they know these trees will be full of fruit the following year and will insure the salesman a warm welcome and a good order for more trees the next year. Seeing is believing. Now comes the Anoka apple to be a real companion as far as early bearing is concerned, because results indicate that when two-year old Anoka apple trees become available they will bear the year after planting.

**One Year ANOKA Trees Bear
the Second Year After Planting**

**Anoka
Bears
Apples
Every
Year**

An Inside View of Anoka
Less Than One-Half Natural Size.

**Anoka
The
Wonder
of
Apples**

The original tree of the Anoka apple is still standing on the State College grounds at Brookings. In a block of over six thousand seedlings this tree was the first to bear and has kept up its habit of annual bearing. Later in other blocks of over four thousand apple seedlings none was found to bear as early as Anoka. So Professor Hansen left this remarkable tree stand. Some day a monument or memorial tablet will be erected to this wonder tree and an iron fence be put around to guard it.

The Original Tree of Anoka Apple

PLANT THE ANOKA APPLE

"The Wonder Apple Of The Century"

Because:—

- 1—One year old Anoka trees bear the second year after planting.
- 2—Anoka forms fruit buds on one year old wood.
- 3—Anoka bears apples every year.
- 4—Anoka is an excellent early summer eating apple.
- 5—Anoka remains a small round topped vigorous tree. The surplus strength each year goes to make more apples and less wood.
- 6—Anoka may be planted closer than the old time trees and thus more trees may be planted on an acre.
- 7—Eventually everybody will plant Anoka, so why not be the first in your neighborhood?

Prices on Anoka Apple Trees

**One Tree \$1.00; Three Trees, \$2.50;
12 Trees, \$10.00, Prepaid; 25 Trees \$18.50,
Prepaid**

SPECIAL!

We have a few small size trees of Anoka Apple to offer at the following prices while they last.
PRICES:—Per Tree, 50c; Six Trees, \$2.50.

ANOKA—A Real Masterpiece of the Fruit Breeders' Art

Be Sure to Include It in Your Order for Fruit Trees

Hopa—Red Flowering Crab

A Flowering Crab of Beauty

The Ornamental For Every Lawn

Introduced for the first time in 1920. A remarkable tree which is entirely covered with beautiful rose colored blossoms in May. It is a cross of Niedzwetzkyana, a red fleshed, red-flowering apple from Turkestan, and the Siberian Crab. Hopa is very hardy, blooms when but five feet in height, and is of such striking beauty that it deserves a place on every lawn. The fruit is red inside and out, and is very ornamental, but the bitter skin protects it from depredations. Later it makes good red sauce. The tree makes a very strong, well balanced growth in the nursery and is a thing of beauty from the beginning. The dark reddish colored bark and foliage are in their way as beautifying as the rose colored blossoms. The color of the leaves and bark livens up the landscape and gives it a cheerful aspect thruout the year. The foliage for summer color and the reddish colored bark for winter scenery. For the best effect and to bring out its beauty Hopa may be planted in a group with other tall growing shrub-

Attractive — Cheery — Desirable

bery or trees, or it may be planted as a specimen tree with excellent results, for as such it shows up splendidly.

Price: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Alexis Crab

Introduced for first time in 1919. It was raised from seed obtained by Dr. N. E. Hansen at Petrograd, Russia, from the Imperial Botanical Gardens. The fruit is of rather long conical shape and of a brilliant dark solid cherry red color, much of the same appearance as Dolgo. The flesh is yellow, and has a sprightly acid taste. Tree is productive and so far free from blight.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Ivan Crab

A noteworthy seedling which was introduced for the first time in 1916. The fruit is of good color, somewhat marbled with stripes of orange and red, of roundish oblate shape, and fully three-fourths of an inch in diameter. The fruit has an acid taste and cooks up fairly well. A peculiarity of Ivan is that its calyx segments entirely disappear in the ripe fruit.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Amur Crab Apple

Excellent For General Use

Introduced in 1912. A seedling of the selected Siberian Crab known as *Pyrus baccata cerasifera*. *Cerasifera* meaning "cherry bearing," because of the bright red color of the fruit. The fruit is about one and one-half inches in diameter, cooks up well and makes a fine bright red jelly. Amur is a very heavy and annual bearer. The tree is upright in habit and so far is apparently free from blight. Amur is hardy far north into Canada.

Amur Bears Heavily

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Russian White Apple

A Worthy New White Fleshed Summer Apple

A Russian apple with a snow-white flesh, from which character it gets its name. The skin is light yellow in color. The apple is of large size and cooks well. It is juicy and slightly sub-acid in flavor. Russian White is really a better cooking apple than eating from the tree, altho it is about as good eating as the Duchess. A fine combination sauce or jam would be one made of Russian White apples and some of the Hansen Crab introductions. Russian White is distinctly a summer apple and not a very good keeper since after ripening it gets mellow rather quickly. The tree makes a good upright growth and is very hardy. A few trees of Russian White in one's orchard would insure a very bountiful supply of early fall cooking apples which would cook up into the kind of apple sauce that makes them all call for more.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Olga Crab

A hybrid of the Duchess apple with the Siberian crab, *Pyrus baccata cerasifera*, which is of the Cherry crab type. In this crab Dr. N. E. Hansen has combined the good points of both parents. Perfect hardiness, early and heavy bearing, bright color, good quality, good size, and just right for canning. The tree makes a very vigorous, spreading growth. Olga is very well liked in Canada for its hardiness, productiveness, size and quality. It is deserving of wide planting thruout the Northwest.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Missouri Wild Crab

Found a good many years ago growing wild near Kansas City, Missouri, by the late Col. J. E. Evans of that city. This fruit was first named and introduced by Col. Evans and later because of its nature Prof. N. E. Hansen obtained some of the stock and re-introduced it. The fruit is roundish, truncated, regular, about two and one-half inches in diameter, and of a rich golden yellow color all over. Has a mild wild crab flavor.

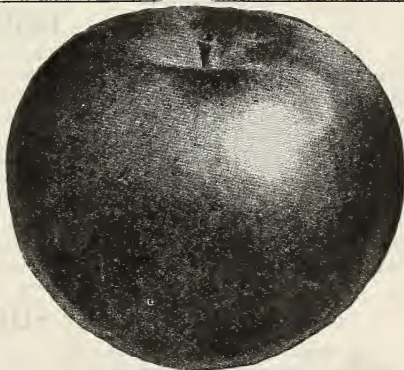

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Chinook Apple

For Winter Use

The first of Professor N. E. Hansen's series of wild crab and standard apple crosses to be introduced. A cross between the Baldwin Apple and the native wild crab from Elk River, Minnesota, which is about forty miles north of Minneapolis. Chinook has promises for the far north. The fruit is about two inches or more in diameter of roundish oblate shape and a fine dark red color, sub-acid flavor, and a long keeper.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

Chinook Apple

Mercer Wild Crab

Found growing wild in Mercer County, Illinois over 30 years ago by N. K. Fluke, of Davenport, Iowa. Later introduced by Professor N. E. Hansen for further use in fruit breeding work. The fruit is oblate, grows to a size of two and five-eighths inches in diameter and has a good yellow color. It has the acid and the acerbity of flavor of the wild crab, which gives a quince-like flavor to apple sauce when cooked with other apples. The tree is a good producer. As an ornament it is worth considering for it is truly a beautiful sight when in full bloom.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

CARAMEL APPLE

A seedling from mixed seed of choice northern apples. Of good medium size. Flesh white and sweet. Skin yellow and covered with red stripes. Of late season. Has promise as a sweet winter apple of high quality.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

KOLA CRAB

One of the prettiest of Professor N. E. Hansen's wild crab and standard apple crosses. A fair cooking apple. Fruit of good size, up to two and one-half inches in diameter, and it bears quite early. The trees make very good growth, forms strong forks, and so far appears to be immune to blight.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

IZO CRAB

A cross of the Yellow Transparent Apple and a seedling of the Mercer crossed with some standard apple. Shape is regular and oblate. Skin yellowish bronze with russet dots. Firm, white, acid flesh. Has promise of a crab that will keep well into the winter.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

GIANT WILD CRAB

Probably the largest wild crab found to date. Good specimens of the fruit have grown to three inches in diameter. The original stock of the crab was obtained by Professor N. E. Hansen from the original tree found wild near Sherrard, Illinois. He introduced it in 1917. It is typically a wild crab in looks and flavor.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

CATHAY CRAB

Of fine ornamental value. Tree rather dwarf like and forms a fine round top. The flowers are two and one-half inches in diameter and have a tendency to doubling. The tree is a beautiful sight when in full bloom in the spring. Cathay is a seedling of *Pyrus prunifolia*, variety Rinki from China. Fruit of fair size and cooking quality.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

LINDA SWEET CRAB

A seedling of Malinda apple top grafted on Sweet Russet Crab Apple. A good sized crab with a much russeted skin. Flesh sweet and mildly sub-acid. More of a late winter crab as it keeps well. The name was derived from its mother Malinda.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

HIBKEE APPLE

A periclinal Chimera or graft hybrid of Hibernial Apple and Milwaukee Apple. The fruit has the flesh and core of Milwaukee and the skin and surface coloring of Hibernial. A puzzling novelty as trees of this nature are very rare. The fruit is of good size and fair eating. The name was coined from its two parents.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

RED TIP CRAB

A cross of the wild crab from Elk River, Minnesota and *Pyrus Malus Niedzwetzkyana*, a small red fleshed apple from the high mountains in Turkestan. The fruit is not for table use but more for ornament as is also its pretty red-tipped young shoots and leaves. An interesting novelty and a worthy ornamental.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

SUGAR CRAB

A seedling of Antonovka. Fruit of good size up to two inches in diameter, roundish oblate, and with a yellow bronze blushed skin. Flesh white with a rich sweet flavor. Of excellent taste to those who like a real sweet apple. Tree so far apparently free from blight. It is also a good cooking apple and keeps well.

PRICE: Per Tree, \$1.00; 12 Trees, \$10.00, Prepaid.

SPECIAL COLLECTION OF APPLES AND CRABS

What was said of plums bearing in mixed plum orchards is equally true of apples and crabs bearing best in mixed apple and crab orchards. The assortment collection will consist of twenty-five large size trees and contain at least fifteen different varieties, our selection, altho preference may be given which will be followed in so far as possible.

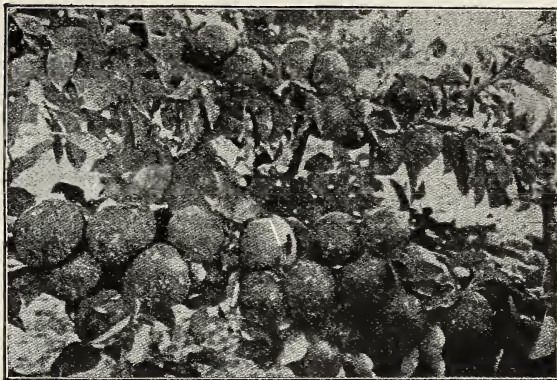

25 Assorted Large Size Apple and Crab Trees.....\$15.00, Prepaid
25 Assorted Small Size Apple and Crab Trees.....\$10.00, Prepaid

Dolgo Crab Apple

Brilliantly Beautiful—Very Productive—Extra Hardy

A Most Remarkable Fruit

A very distinctive crab which when once seen is always remembered. The fruit has a rather long conical shape and is not very large, but the abundant productiveness of the tree more than makes up for any lack in size of the fruit. The color of the fruit is a beautiful, brilliant red, and the ripe fruit on the tree is a wonderful sight to behold. The bright, shiny, green leaves apparently receding a little to form a background and frame for the rich ruby red fruit. And blossom-time in the spring never fails to bring great admiration.

Dolgo Bears Heavily

Dolgo Bears Early

The fruit is full of juice and has a sprightly sweet flavor. Good to eat from tree or making a very fine bright clear red jelly of excellent flavor. Many think that crab apple pickles made from Dolgo fruit are the best that can be made.

The tree of Dolgo has so far proved free from blight. It makes a very strong growth in the nursery and forms strong, wide-spreading forks and strong shouldered limbs, which accounts for the fact that Dolgo can bear such heavy crops without injury.

Another remarkable character of Dolgo, expressed by Professor A. F. Yager, of the North Dakota State Experiment Station at Fargo, is as follows: "Dolgo Crab even when in full blossom survived freezes which killed all other varieties."

Dolgo is perfectly hardy far north into Canada and is almost a sure annual producer of a fine crop of fruit.

It is the nature of Dolgo to bear early and it usually bears the second or third year after planting,—almost as soon as Anoka many find.

Dolgo is a crab apple that you cannot go wrong on and too much praise cannot be given its value. Everyone should have at least a few trees of Dolgo.

PRICES ON DOLGO TREES

One Tree, \$1.00; Three Trees, \$2.50; 12 Trees, \$10.00, Prepaid; 25 Trees, \$18.00, Prepaid

SPECIAL OFFER!

While they last to those who wish them we have a very limited number of small size Dolgo trees to offer at the following prices.

PRICES: 50c Per Tree; Six Trees, \$2.50.

-
- SHOKO CRAB** A cross of the Alexander Apple and the wild crab from Elk River, Minnesota. Fruit green, acid, and nearly two inches in diameter.
PRICE: Per Tree, \$1.00.
-
- TIPI CRAB** A hybrid of Duchess apple and the wild Elk River, Minnesota crab. Fruit much like the Kola Crab.
PRICE: Per Tree, \$1.00.
-
- BEAUTY CRAB** A seedling of *Pyrus baccata cerasifera*. Fruit a brilliant solid cherry red. Fine for jelly.
PRICE: Per Tree, \$1.00.
-
- MAGA CRAB** A seedling of the MacIntosh Red Apple top grafted on the Virginia Crab. Fruit of good size, red striped, and of good flavor.
PRICE: Per Tree, \$1.00.
-
- OXBO APPLE** A seedling of the Roxbury Russet apple top grafted on Duchess Apple. Fruit fair size, white flesh, juicy, subacid.
PRICE: Per Tree, \$1.00.
-
- LEMON APPLE** Imported from Russia. Size up to three inches in diameter. Flesh white, mildly subacid and of good quality.
PRICE: Per Tree, \$1.00.
-
- GOLDO APPLE** A seedling of Grimes Golden top grafted on Duchess. Fruit of excellent flavor, Grimes shape, only larger in size. Has promise of being a great commercial apple for the northwest.
PRICE: Per Tree, \$1.00.
-
- ZELEBA APPLE** Imported from Russia. Fruit a very large, round red apple. Flesh white with pleasant sub-acid flavor.
PRICE: Per Tree, \$1.00.
-
- ADNO APPLE** A large, red, very handsome late fall apple of fair flavor. Imported from Russia.
PRICE: Per Tree, \$1.00.
-
- ZAPTA CRAB** A hybrid of the Bismarek Apple and the Elk River Crab from Minnesota. Fruit large and acid acerbitly.
PRICE: Per Tree, \$1.00.
-
- SASHA APPLE** A cross of Hibernal Apple with the Gravenstein Apple. Fruit fair size and of excellent, sweet quality.
PRICE: Per Tree, \$1.00.
-
- NEW DUCHESS APPLE** Imported from Russia. Fruit a good deal like the Duchess of Oldenburg with a tendency to be larger.
PRICE: Per Tree, \$1.00.
-
- SEREDA APPLE** Produced from seed of the Harry Kaump apple, top grafted on the Duchess Apple. Season early. Fruit yellow, acid.
PRICE: Per Tree, \$1.00.
-
- CHANCE APPLE** A chance seedling from mixed seed of northern grown apples. Fruit commercial size, red striped, white flesh, subacid flavor, attractive appearance.
PRICE: Per Tree, \$1.00.
-
- PYRUS BACCATA** The wild crab apple from the cold parts of Siberia, on which we bud or graft all the apple trees which we sell, to insure a hardy root system. The trees are ornamental, form a good wind break, and the fruit may be used for pickling or jelly. This tree is worthy of a place on the lawn.
PRICE: 25c per tree; 12 Trees, \$2.50; 25 Trees, \$5.00; 100 Trees, \$15.00, Prepaid.

Dr. N. E. Hansen and a Single Cossack Alfalfa Plant

Semipalatinsk Alfalfa

This yellow-flower alfalfa was brought by Professor N. E. Hansen from Semipalatinsk, Siberia, where the annual rainfall is only eight inches, and the temperature ranges from 51° below zero in winter to 106° above in summer. The seed we have to offer of the Semipalatinsk is descended from the original stock. It is perfectly hardy far north into Canada and it will produce an abundance of forage in the driest year.

SEED PER PACKET, 50c

Everyone knows the value of alfalfa as a cattle food and at least a few scattered plants in the pasture is a great asset. And also a few plants in the chicken yard will make the hens lay better as experiments have proved. The plants we offer are fine, large two and three year old root clumps. For appreciable results it is advocated that at least one hundred plants be planted to the acre. The plants may be easily planted in the pasture or hay field just after a rain by taking a spade and prying the ground open and inserting the plants here and there over the field.

PRICES PREPAID.

Large 3 year clumps, 20c each; six plants, \$1.00; 12 plants, \$1.50; 100 plants, \$10.00.

Small 2 year clumps, 10c each; 12 plants, \$1.00; 25 plants, \$1.50; 100 plants, \$5.00.

Cossack Alfalfa From a half teaspoonful of seed in 1906 to one thousand bushels in 1916 is the marvelous record of this best of all alfalfas for the Prairie Northwest. It was brought from Russia and named by Professor N. E. Hansen. Now there are many thousand acres of Cossack and a heavy production of forage from a half teaspoonful of seed. Many farmers by sowing small packets in their garden and transplanting have worked up a large acreage. The seed we have to offer of the Cossack is descended from the original stock.

Seed per packet, 50c.

Hansen Clover

Sometimes incorrectly called Arctic Clover in Canada, but is not really arctic in range and the real and prior name is Hansen White Siberian Sweet Clover. Professor N. E. Hansen should have the full credit for bringing it in 1913 from the dry Semipalatinsk region of Siberia. In Saskatchewan this Hansen Clover has proven the hardiest and bids fair to be worth millions of dollars to Canada. But keep the name straight.

Seed per packet, 50c.

The following apples are not originations of Professor N. E. Hansen, but some of the other rather commonly known apples of the northwest. All are budded on *Pyrus baccata* except the small size Wealthy trees offered which are worked on common apple.

WEALTHY APPLE—Well known to all good fruit men of the middle west. A splendid late summer and early fall eating and cooking apple. Wealthy is said to be the most perfectly shaped apple in the world. PRICE: 75c each; 10 Trees, \$6.50. Small Size Trees 20c Each, Prepaid.

YELLOW SWEET APPLE—One of the best early eating apples. An old Russian variety and very hardy for the northwest. Size over two inches in diameter. Skin a light yellow, pink blushed. Flesh white in color and very sweet. PRICE: 75c each; 10 Trees, \$6.50.

WHITNEY CRAB APPLE—Of rather small size but of excellent flavor. A summer apple that one always looks forward to and regrets when its season is over. A hardy tree but not very resistant to blight. PRICE: 75c each; 10 Trees, \$6.50.

HIBERNAL APPLE—A good cooking apple, fair eating and good keeping. Very hardy. Tree sturdy, upright, and thoroughly branched. Fruit of good size, though not very attractive in appearance. A long lived tree and an annual producer. PRICE: 75c each; 10 Trees, \$6.50.

SWEET RUSSET CRAB APPLE—The fruit is small in size, rather oblate in shape, very sweet, and with a skin of russet brown texture and color. The tree usually bears heavily, commencing to bear when quite young. It makes a good sturdy, well branched, spreading growth. The fruit makes good sweet apple pickles. PRICE: 75c each; 10 Trees, \$6.50.

SPECIAL COMBINATION APPLE TREE OFFER

One Tree Each of the Above Five Varieties of Apples, \$3.50.

Three Trees Each of the Above Five Varieties of Apples, \$10.00, Prepaid.

Hansen Proso

THE BEST CEREAL CATCH CROP FOR THE NORTHWEST

In seasons when wheat, barley, rye, and oats fail in the dry inland regions of eastern Europe and Asia, Proso, a grain millet, always gives a crop. Proso feeds many millions of people in the Old World from India north into Siberia. There are many varieties,—black, red, yellow and white. Live stock eat Proso readily and can be fattened for the market without any other grain than Proso.

Professor N. E. Hansen in his four tours to Siberia, brought back thirty-two different varieties of Proso which have been widely distributed. But he chose only one variety, that from Semipalatinsk, Siberia, for further development, and selected it for its white color, larger kernels, and greater productiveness.

It is a valuable, catch cereal, grain crop for later sowing, when other crops fail, even far South. In the North, Proso will become a staple grain crop. The grain will ripen in sixty days after sowing in an eight inch rainfall country. It often yields three hundred fold. One pound sown in late June usually means four or five bushels by fall, of good grain that weighs sixty to sixty-four pounds per bushel. Good as a breakfast food for the table or to fatten all kinds of livestock for market. Professor N. E. Hansen is still working with this, his favorite variety, altho it is very desirable at the present time.

Every farmer in the Northwest should at least give Proso a trial, just a small idle strip if nothing else, and see for himself the remarkable qualities of Hansen Proso. It should be sown ten to fifteen pounds per acre for best results.

Prices F. O. B. Brookings: 10 pounds \$1.00; 25 pounds \$2.00; 100 pounds \$6.50.
Trial pound 25c, Prepaid.

NEW ULM BLACK WALNUT

Introduced by Professor N. E. Hansen from plants grown from seed he obtained at New Ulm, Minnesota which is probably the farthest northwestern limit of the native black walnut. This beautiful and useful tree has long been of great value to planters farther south but this northern form now avails it for planting much farther north. Nuts contain many valuable vegetable oils and proteins and other foods, and those who believe in foreseeing things say that much of our future food supply will come from nuts. Perhaps it may be best to get this thing started now.

PRICE: Per Tree, \$1.00.

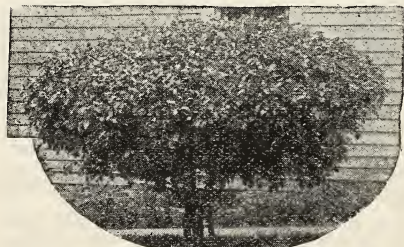

URAL WILLOW

VERY HARDY—RAPID GROWING—SELF TRIMMING

For a low windbreak of great hardiness nothing is better than Ural Willow. It is an ornament of beauty and utility. It is often called the Siberian Hedge Wood. This willow comes from the Ural Mountains of Siberia and has slender supple stems, which may be tied in a knot without breaking.

Ural Willow is quick growing. Has a neat bushy habit of growth and will form a nicely shaped round topped hedge of eight to ten feet in height without trimming, but will stand pruning if a lower height is desired. The leaves are long and slender and are a pretty, shiny, silvery green color.

PRICES: Per Plant 25c; 10 Plants \$2.25; 25 Plants \$4.75; 100 Plants \$15.00, Prepaid.

A Fine Specimen or Hedge Plant

SIBERIAN BUCKTHORN

The Siberian form of the common buckthorn and superior to it in many ways. It is hardy far north into Canada. The foliage is finer, a brighter green color, and appears earlier in spring. It has small white flowers in early spring followed by black berries in late summer and fall. The plant makes a very neat hedge or a fine specimen plant when planted singly. As a hedge plant if planted close enough makes an impenetrable wall and an excellent windbreak. It may be trimmed with success or left to grow into a nicely shaped tree. As a specimen plant it may be trimmed into almost any shape and is an excellent plant and one of the few that can be used successfully in topiary work.

PRICES: Per Plant 30c; 10 Plants \$2.75; 25 Plants \$5.25; 100 Plants \$16.00, Prepaid.

FLOWERING SIBERIAN ALMOND

A SPLENDID ORNAMENTAL OF GREAT WORTH

A beautiful lawn shrub which Professor N. E. Hansen thinks is destined to great popularity. It is very hardy. In early spring before the other shrubs are out and its own leaves scarcely appear, it is covered with abundant bright, rose pink, fragrant flowers. It remains a beautiful mass of blooms for nearly three weeks. Being native of an eight inch rainfall country with the temperature ranging from 50° below zero in winter to 100° above in summer it is capable of defying the most severe conditions thruout the northwest prairies. Every home should have at least a few Siberian Almonds around their house in front of taller shrubs, as the Siberian Almond is dwarf growing and is best when used in border planting.

PRICES: Large Bushes—Each 50c; Six \$2.50; Twelve \$5.00. Small Bushes—Each 25c; Six \$1.25; Twelve \$2.50.

Siberian Rugosa Rose

THE HARDY ROSE FOR PRAIRIE HOMES

This well known and beautiful rose is one of the hardiest of roses. The plant needs no protection whatsoever in winter throughout the great northwest and Canadian Prairies. It is a continual bloomer and the plant is covered with beautiful blooms all summer long. The flowers attain a size of three to four inches across the petals. They are generally single and very fragrant. The color is usually a pretty, light lavender, shell pink. The bright red hips or seed pods

give the bush a bright and cheery appearance all winter long.

When planted alone as a specimen shrub the plant attains a height of six to seven feet. But when trimmed makes a nice border plant or it can be planted in a row to form a hedge.

Price Prepaid 25c Per Plant.

Tetonkaha Rose

A VERY DESIRABLE ROSE

Tetonkaha is a very choice and desirable rose introduced by Professor N. E. Hansen. It is a cross between a wild rose from Lake Tetonkaha, a lake about eighteen miles northwest of Brookings, and a Siberian Rosa Rugosa Hybrid. Thus making it a combination of at least three species.

Tetonkaha is a very choice flower and free bloomer, flowering abundantly all summer long. The flowers are fully three inches in diameter, upwards to twenty-five or more petals, a deep rich pink, and wonderfully fragrant. The bush is of upright habit and vigorous growth. It is perfectly hardy far north. The plants offered are own rooted.

PRICE: Per Bush \$1.00; 12 Bushes \$10.00, Prepaid.

Caragana or Siberian Pea Tree

THE BEST WINDBREAK AND HEDGE PLANT FOR NORTHWEST PRAIRIES

By far the hardiest and best windbreak and hedge plant for the most exposed prairies is Caragana and one which will endure severe drouth. This plant is recognized by the Canadian Government as the best snow-catcher and hedge plant for Manitoba, Saskatchewan, and Alberta. Its full name is Caragana arborescens, the latter name referring to the tree-like habit. It is not really a tree but a shrub of tree-like habit growing to a height of about twenty feet when not trimmed.

In Russia, Siberia, and Northern Europe generally, Caragana is the great favorite for hedges and for single specimens or in groups on the lawn.

In Manitoba and Saskatchewan and the northwest generally, Caragana is found especially desirable as a protecting hedge around gardens and orchards on exposed prairies. This makes a tight wind-proof wall of living green foliage in summer and in the winter the tough branches resist the drifting snow and do not break down as do so many other shrubs and trees. The great value of Caragana is outstanding and it should be on every lawn, because of its utility, its beautiful green foliage, feathery leaves, and abundant yellow blossoms.

The stock we have to offer is young, thrifty, and has all been transplanted and headed back, thus an excellent root system, nicely branched plants and a rapid sure growth are assured.

PLANT PRICES

- 12 to 18 inches—10c each; \$0.85 per 10; \$2.10 per 25; \$ 7.50 per 100.
- 18 to 24 inches—15c each; \$1.30 per 10; \$3.15 per 25; \$10.00 per 100, Prepaid.
- 2 to 3 feet —25c each; \$2.00 per 10; \$4.50 per 25; \$15.00 per 100, Prepaid.
- 3 to 4 feet —35c each; \$2.95 per 10; \$6.75 per 25; \$20.00 per 100, Prepaid.

Extra Large, Select Plants, For Specimen Planting—75c Each.

M A Y

THE BEAUTIFUL FLO

Professor N. E. Hansen And The May Day Tree

In eastern Siberia and Manchuria there grows a Bird Cherry which is remarkable for being the earliest of all trees to leaf out in the spring. And this tree is truly beautiful when in full bloom, making a huge bouquet of fragrant white flowers born in long racemes. The individual flowers are fully one-half inch across. A few days later the leaves unfold in all their glossy beauty. Later appears the heavy crop of shining black cherries which are claimed by the birds which appear to prefer them to what we consider better fruit.

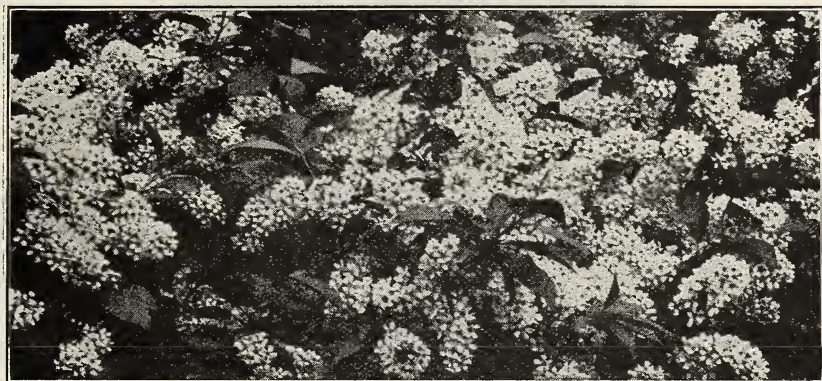

As this tree is always in bloom by the first of May it was well named the May Day Tree by the late Professor J. L. Budd of Ames, Iowa, who introduced it. The present stock descends directly from this first importation. Well may the long branches, so thickly set with fragrant white flowers, be used for garlands and to crown the Queen of May.

For the lawn the superb beauty of the May Day Tree will please and impress everyone. In addition the tree does not sucker, and so does not make the trouble the native choke cherry does with its multitude of suckers or sprouts from the roots.

Dr. N. E. Hansen in his work in improving the native choke cherry by selection found it impossible at first to control the suckering or sprouting habit, but he has entirely overcome

GLORIOUS—ALLURING—WONDERFUL

DAY WERING LAWN TREE

Close-Up View Of The Flowers Of The May Day Tree

this trouble in recent years by using the May Day Tree as a budding stock for his select choke cherries as such trees do not sucker.

The tree is perfectly hardy at Brookings and will be hardy far north up into Canada, owing to its far northern origin in Asia.

For windbreaks and hedges, upon the most exposed prairies, the May Day Tree has a very great value because of its dense round-topped habit of growth, and its very early leafing. Long before other trees come out into full leaf, the May Day Tree is in full leaf, ready to serve as an efficient wind-stopper. And again note that there are no suckers or root-sprouts to bother in cultivation as a wind-break or to make trouble for the lawnmower on the lawn.

This tree was first received from Russia under the name *Prunus Maackii*, but later it turned out to be a quite different tree. The real name of this most desirable lawn and wind-break tree is *Prunus Padus Commutata*, but better call it May Day Tree for every day.

The Arnold Arboretum at Boston, Massachusetts contains by far the largest collection of trees in North America. The famous Director, Charles S. Sargent, who knows trees better than anyone else, has called attention to the beauty and desirability of the May Day Tree and says that this tree is remarkable in Boston for flowering about three weeks in advance of any other bird cherry, being usually in bloom by the middle of April.

Dr. L. H. Bailey, the eminent author of the American Cyclopedia of Horticulture, says that this tree makes a shapely tree ten to twenty feet tall and is noteworthy because it is one of the earliest of all trees to leaf out in the spring.

Prices on May Day Trees

One Tree, 65c; Two Trees, \$1.25; 10 Trees, \$5.00;
25 Trees, \$10.00, Prepaid; 100 Trees, \$35.00, Prepaid.

SPECIAL!

For obtaining a more immediate effect in plantings some people want a larger tree than most prefer. The trees we have to offer were especially selected for their large size, nice branching, and good root system.

PRICE: Extra Large Select Specimen Trees, \$1.25 Each; Three Trees, \$3.50.

Special Gladiolus Assortment

If you like a good assortment of gladiolus, and yet don't care particularly about what the name of each individual variety is, get one of our special assortments of gladiolus bulbs. They are made up of only our choicest varieties and contain a great many different kinds and have a wide range of color

and shades. They do not contain just a few varieties of gladiolus we have in surplus and wish to get rid of cheap. The bulb size and quality of these assortments is in every way equal to those we offer by name, but the bulbs come assorted and with no individual name with them.

All Bulbs Packed and Delivered Free

SPECIAL SMALL SIZE GARDEN ASSORTMENT

A fine assortment, and the best size for the small garden or flower bed, considering the space the plants will fill when grown from the size bulbs we send. This assortment contains at least ten different varieties.

16 Choice Assorted Large Size Gladiolus Bulbs.....	\$1.00
16 Choice Assorted Medium Size Gladiolus Bulbs.....	.50
16 Choice Assorted Small Size Gladiolus Bulbs.....	.25

A BIGGER AND BETTER ASSORTMENT

This assortment is the best for the average garden and will give many bouquets and much delight to all who plant it. At least fifteen different varieties are in this assortment.

35 Choice Assorted Large Size Gladiolus Bulbs.....	\$2.00
35 Choice Assorted Medium Size Gladiolus Bulbs.....	1.00
35 Choice Assorted Small Size Gladiolus Bulbs.....	.50

SPECIAL LARGE SIZE ASSORTMENT

For the gladiolus fan this assortment is a splendid one. It is selected from a large number of our choicest varieties and will give its owner many happy hours. This assortment will contain at least 25 different varieties, usually about two each of a kind. Because of the number of varieties in this assortment, and their different season of blooming one should have flowers from towards the end of July till the heavy frosts come.

50 Choice Assorted Large Size Gladiolus Bulbs.....	\$3.00
50 Choice Assorted Medium Size Gladiolus Bulbs.....	1.50
50 Choice Assorted Small Size Gladiolus Bulbs.....	.75

OUR BIGGEST AND BEST GLADIOLUS ASSORTMENT

For those who want a big assortment and a large number of varieties of Gladiolus in it, this assortment is the best to get. It will contain early, medium, and late blooming varieties,—ruffled and plain petaled varieties,—and all kinds of pure and combined color varieties. The assortment will contain 100 bulbs and at least 50 different kinds selected from our choicest varieties of our whole collection which numbers well over 400 different sorts.

100 Choice Assorted Large Size Gladiolus Bulbs.....	\$5.00
100 Choice Assorted Medium Size Gladiolus Bulbs.....	2.50
100 Choice Assorted Small Size Gladiolus Bulbs.....	1.25

SPECIAL GLADIOLUS VARIETY COLLECTION

100 Bulbs — ONLY \$5.00 — 100 Kinds

If one wishes a collection of varieties this special variety collection is positively the best one to get. For the Gladiolus fan or one interested in hybridizing Gladiolus, this assortment is a real collection and certainly offered at a bargain price. The bulbs in this collection, will of course, come unlabeled, but for an extra charge of \$3.50 per collection each bulb in the assortment will come labeled. This assortment is offered only in medium sized bulbs but with good care all should bloom the first year.

Above Offer As Stated

100 Assorted Bulbs Unnamed, \$5.00

100 Assorted Bulbs, Named, \$8.50

SIBERIAN BUSH HONEYSUCKLE

A Beautiful Sight in Winter

For Shelter And Ornament

Much money is saved by stock men in planting good shelter belts. Cattle need less corn for the same gain if well protected in the feed lots. But most windbreaks grow too tall with age, leaving the lower stems bare. Here is where tall shrubs of luxuriant foliage and bushy habit help. Bush Honeysuckle and Caragana will be found of the greatest value. Their tough branches are not broken by snow drifts. They need no trimming and this saves time. Above all they retain their lower limbs thru life, stopping the wind perfectly the first twenty feet next to the ground. The Bush Honeysuckles from Siberia are from a dry region with temperature ranging from over 50° below zero in the winter to over 100° above in summer and only eight inches annual rain fall.

Plant these Bush Honeysuckles not only as single specimens or in a group on the lawn, but for snow-stops and low windbreaks. Their great loads of beautiful rose-pink and white flowers in spring delight everyone with their sweet fragrance. The bees harvest abundant honey from their blossoms and later the great crops of red or orange colored berries furnish food for the birds. This bright colored fruit is one point of advantage over the Caragana. Plant a single row on the outside to catch the snow so it will lodge in the open snow trap on the north or west side. Plant on the inside to furnish beautiful flowers in early spring. Plant a row wherever you wish a screen to hide outbuildings or service yard in country or town.

You need never fear that they will winter-kill. These hedges grow more beautiful as the years go on. Prune them back in early winter if at any time you wish to head them back to a hedge of formal habit. You will probably want to leave them to grow in all their luxuriance, defying the heat, the cold, and the storms of summer and winter.

The school house campus, the church lawn, the community park, all will acquire added beauty by a free planting of these Siberian Bush Honeysuckles.

PRICES

- 12 to 18 inch Bushy Plants: 15c each; 10 for \$1.25; 25 for \$2.50; 100 for \$ 8.50.
 18 to 24 inch Bushy Plants: 20c each; 10 for \$1.75; 25 for \$3.50; 100 for \$12.50, Prepaid.
 2 to 3 feet Bushy Plants: 25c each; 10 for \$2.00; 25 for \$4.00; 100 for \$14.50, Prepaid.
 3 to 4 feet Bushy Plants: 30c each; 10 for \$2.50; 25 for \$5.00; 100 for \$16.50, Prepaid.
 Extra Large Select Plants For Specimen Planting 50c Each.

DAHLIAS

Dahlias are very easy to grow, require but little care and are very productive of beautiful flowers. They also yield numerous tubers for further propagation.

We have all the best good standard choice sorts which produce such large, fine displays of beautiful flowers of many colors and shades. Many kinds of yellow, red, white, and mixtures of them, are in our assortments. These assortments we make from only the best good standard choice sorts and they contain only large size, strong, healthy tubers.

PRICE: 12 Choice Assorted Tubers \$1.50; 25 Choice Assorted Tubers, \$2.25.

Packed and Delivered Free.

CANNAS

This large tropical beauty has a place on every lawn in single rows or flower beds of formal nature. A bed of them is a place of beauty thruout the summer.

PRICE: 12 Roots, Good Mixed Colors, 75c; 25 Roots, \$1.40. Packed and Delivered Free.

TULIPS

No flower has more vivid colors and a better mingling of brilliant hues than does the tulip. An age long favorite bringing a joy for the early spring. No landscape planting is complete without tulips. Planted in the fall of the year anytime before the ground is frozen, they come up in the spring to give the assurance that summer is coming. They beam out in all their radiant beauty and will last for years with scarce any care.

PRICE: 12 Assorted Bulbs, \$1.00; 25 Assorted Bulbs, \$1.50; 100 Assorted Bulbs. \$5.00.

Packed and Delivered Free.

IRIS

Of the hardiest of varieties of Iris, perhaps none is more popular and gives more joy than the Dwarf Flowering Blue Flags as they are so often called. It is a dwarf variety of hardy Iris, a vigorous grower and rapid reproducer. A brilliant blue in color and ideal for a border planting along the edge of a walk or flower bed. Blooms for a period of about three weeks in early spring.

PRICE: Per Root, 15c each; 2 Roots 25c; 12 Roots, \$1.15; 25 Roots, \$2.00; 100 Roots, \$8.25.

Packed and Delivered Free.

PEONIES

The superb flower that holds sway in the garden with a grandeur and splendor of beauty. With their gorgeous array of colors, peonies always give to the garden an effect of fairyland. Its beauty unquestioned, a place always found for it. No home should be without its peonies. Hardy in the coldest of places. Blooming for years with little care or attention. Peonies are a priceless possession that all should have.

PRICES: By colors—Pink, Red, White: 50c each; 12 for \$5.00.

PRICES: Assorted—1 each of Red, White, and Pink, \$1.25.

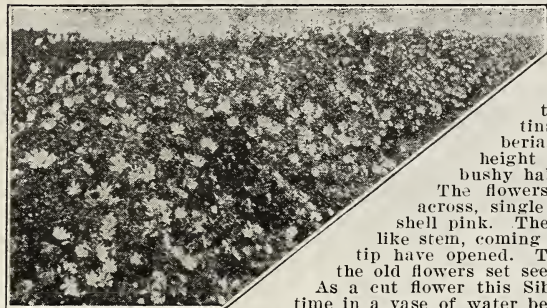

PRICES: Assorted—2 each of Red, White, and Pink, \$2.30.

PRICES: Assorted—4 each of Red, White and Pink, \$4.50.

Packed and Delivered Free.

Siberian Lavatera

A PRETTY FLOWERING PERENNIAL

Siberian Lavatera or Lavatera Thuringiaca, was first brought by Professor N. E. Hansen in 1913 from the dry prairies or steppes of Semipalatinsk,—a very cold and dry section of Siberia. Under cultivation it will attain the height of six to seven feet. It has a rather bushy habit and branches well.

The flowers are large, up to two to three inches across, single and usually a pretty, delicate, lavender shell pink. They are borne in clusters on a long spike-like stem, coming out gradually until the buds at the very tip have opened. The new buds coming on continually as the old flowers set seed, and fade to a creamy white and fall. As a cut flower this Siberian Lavatera is fine and lasts a long time in a vase of water because of its blooming habit. Sometimes keeping nicely as long as three weeks in the house. However it is not necessary to pick the flowers to keep the plant blooming.

The plant is a long lived perennial. It makes a nice border plant in a planting of tall shrubs, and a good annual garden hedge. One advantage of Siberian Lavatera as a garden hedge is that it dies down in the fall and does not catch as much snow as a tree or shrub. The plants offered will all bloom this coming season if properly planted and cared for.

PREPAID PRICES: Per Plant, 35c; Three Plants, \$1.00; 25 Plants, \$7.50.

LAST YEAR'S CATALOG—SPRING 1925—CATALOG ONE

Giving a more complete description, in some cases, of Professor N. E. Hansen's plum introductions, and describing more gladiolus varieties and some other of our nursery products, than given in this year's catalog.

PER COPY 10c, PREPAID.

Flower and Vegetable Seeds

ALL SEEDS SENT PREPAID

GLADIOLUS SEED

This is hand-selected seed picked from some of the best in over 400 varieties. Much of the seed is hybridized, some selfed, and all should produce quite an amazing array of beautiful flowers. Some of the seedlings may be worth naming and further propagation.

Seed Per Packet 25c.

BALSAM SEED

One of the best annual, shrub-like, flower plants, making a rapid growth to a symmetrical height of two to three feet with its branches thickly set with pretty, somewhat bell-shaped, perfumed flowers.

Seed Per Packet 15c.

SNAPDRAGON SEED

Seed of the best and largest varieties of this famous old flower, always appropriate and a beautiful addition to any garden. Start Snaps in the house and transplant to the garden later.

Seed Per Packet 15c.

COREOPSIS SEED

The pure golden yellow color of Coreopsis is unexcelled in any other flower. The flower is daisy-shaped, up to two inches across. The flowers have very long stems and last well in water. A good garden perennial.

Seed Per Packet 10c.

POPPY SEED

This lovely flower from the Orient never fails to bring more beauty and add attractiveness to one's garden. The seed we offer is especially selected from choice large double red poppies.

Seed Per Packet 15c.

BACHELOR BUTTON SEED

The good old time garden favorite. The seed we have to offer is made up of a mixture of many colors from good strong, stocky plants. Bachelor Buttons need little care and make a lovely flower to border your garden walk.

Seed Per Packet 15c.

WOOD'S SELECT YELLOW TOMATO SEED

Developed from a hybrid of the Yellow Pear and Globe tomatoes by Wm. B. Wood. Good to eat and fine for canning or table use. The fruit is a good keeper and is noteworthy for its firm, almost solid flesh texture. Seed very limited.

Seed Per Packet 15c.

TABLE QUEEN SQUASH SEED

This is the squash that is so handy and easy to bake. It is small but so convenient. Cut in half, cleaned and baked with butter it makes a fine dessert or side dish. The vines are very productive.

Seed Per Packet 10c.

DILL SEED

The essential ingredient to put the right flavor into dill pickles. Grows rapidly and produces an abundance of stalks and seed. Dill is an herb that no garden should be without.

Seed Per Packet 10c.

PIE PUMPKIN SEED

This is selected seed from a selected strain of the old original, genuine pie pumpkin. Especially good because of its fine, even texture of flesh. Pumpkins from this seed will make much better pies and soup than the canned kind you buy. The vines are very productive.

Seed Per Packet 10c.

HUBBARD SQUASH SEED

To be sure of plenty of good squash plant the Hubbard. Altho a good deal larger than Table Queen its flavor according to many, is much superior. But then that may be entirely a matter of taste. However we like the Hubbard and that is why we raise it.

Seed Per Packet 10c.

SUNFLOWER SEED

This seed is from a special select, giant strain of sunflowers. Sunflowers have long been known for their great medicinal value in helping to keep in trim man and beast. There is beauty as well as utility in sunflowers.

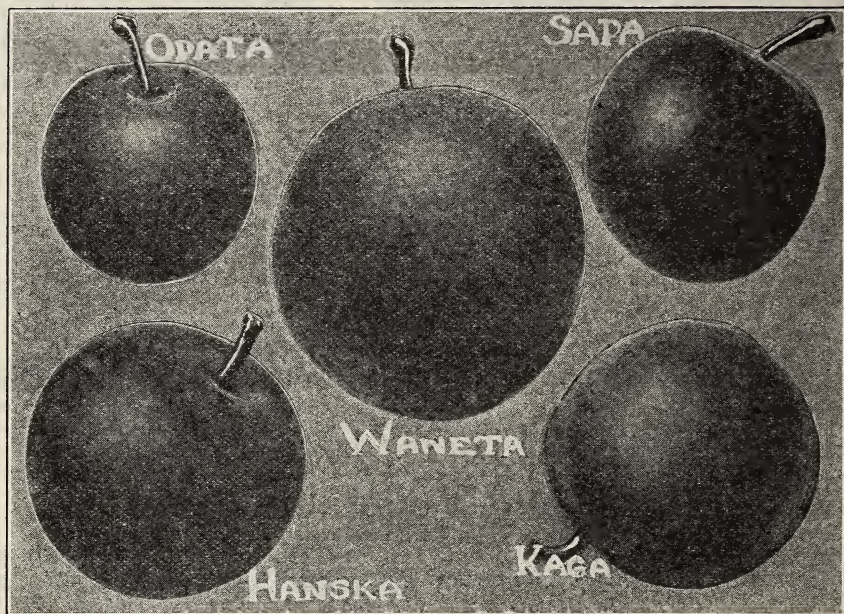

Seed Per Packet 10c.

✓ **WANETA PLUM**—The Giant of Hardy Plums. Up to two inches in diameter. Highly flavored. Richly colored red skin. Perhaps the best of the Hansen Hybrid Plums and the champion plum of the northwest.

OPATA CHERRY-PLUM—Earliest of all plums and famous everywhere for its rich, wonderfully delicious flavor. The flesh is a light green color with a purplish red skin. Very productive. Hardy thruout the northwest prairies.

SAPA CHERRY-PLUM—Early, large, productive, and hardy. Its intense black purplish flesh is extra fine eating and wonderful for preserves and jam. Bears the year after planting. A sure annual producer and a favorite everywhere.

HANSKA or KAGA PLUM—The superb plums of apricot flavor and fragrance. Very hardy and productive. Many claim these two make the best jam of any of the Hansen Plums. Both are highly colored and have firm flesh. These two plums differ in that Kaga is the more free-stone and somewhat better producer, whereas Hanska has a little the better flavor.

SPECIAL COMBINATION BARGAIN OFFER

3 trees each of the above four favorite varieties of plums originated by Prof. N. E. Hansen
